

Combination of  
RollerMouse  
Red and  
ArmSupport  
Red

## Throughout your work day.

Want to work in a smarter way and be able to focus on your job rather than on how you are sitting? Keep your natural posture and spare your arms, shoulders, neck and back with a computer mouse and a forearm support that are designed for gentler body movements.

### Comfort and productivity

Now you can work with high precision and no strain, enjoying comfortable support throughout the day whether you are standing up or sitting down. Through a combination of two ergonomic products, RollerMouse Red and ArmSupport Red, you can easily optimize your workplace.

### Unmatched feel and precision

With this comprehensive solution you will have full control, making you less tired and reducing tension in your body. This is especially noticeable if you work with multiple monitors or CAD, as the RollerMouse Red automatically expands the pointer reach sideways. You can easily adapt it to your needs and will quickly learn how to use the clever functions. The stable, rubberized roller bar with a textured surface gives you complete control with only small movements of either hand.

### Relief and comfort

You will get relief for your forearms, reducing the strain on your entire upper body. The extended forearm support is easy to attach and ensures that your hands and wrists are relaxed throughout your working day. You can work in an ergonomic way almost anywhere, even with a limited workspace.

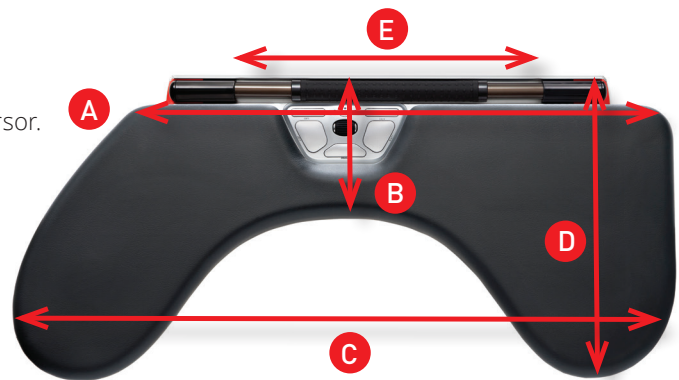

# RollerMouse® Red max

## Functions

- A Copy.** The 'one touch' copy button.
- B Left click.** Use the large left button to left click.
- C "One touch" double click.** Get two clicks in one with the 'one touch' double click.
- D Cursor speed adjustment.** Quick and easy speed selection. Get high precision with a click.  
Choose between five cursor speeds ranging from 600 dpi to 2400 dpi. The default setting is 1000 dpi.
- E Scroll wheel.** Move up and down, middle click and auto-scroll lock.
- F Right click.** Use the large right button to right click.
- G Paste.** The 'one touch' paste button.
- H Rollerbar.** Roll the bar up, down, and sideways to move the cursor.
